

Watch This Video and Learn *What Not to Healthcare*

Cable network TLC's hit TV series *What Not to Wear* has helped numerous viewers and show participants learn how to break bad fashion habits. During each episode, the hosts Stacy and Clinton provide an unsuspecting person with a complete makeover, including cleaning their closet of fashion don'ts and sharing tips on fashion dos.

Children's is undergoing a makeover of its own as we transition more functions into our electronic medical records system, Epic. As you likely know by now, [our next series of implementations](#) will combine the patient information that scheduling, registration, billing, surgical services and 11 of our ancillary departments with the inpatient, radiology, pharmacy and medical records data already in Epic. The integration will continue to increase our ability to see a more comprehensive picture of the entire patient experience.

Just as *What Not to Wear* participants have a hard time letting go of their favorite baggy t-shirts and outdated pant suits, it can be challenging to get out of your old paper charting habits and break away from the stand-alone information systems you've been using for years. We created the [*What Not to Healthcare*](#) Epic video to explain how one of our upcoming implementations will impact staff and illustrate how using Epic can save you time and improve patient safety. It also outlines what other rollouts are on the horizon. Take some time to watch the video and learn more about the benefits of our transition to Epic.

After the video, [take this quiz](#) to see if you're prepared for the April 20 and May 1 implementations. We will randomly select 10 people who complete the quiz to win five Celebrations! points.

For questions about Epic and how it may impact you, visit the [Epic information page](#), or speak with your manager, super users or department champions.

Don't watch the video on shared workstations, including chart carts and prox/bio-enabled devices, because the file size could slow down our servers that support important patient care applications, such as Epic. Please also be sure that the computer you play this video on has sound capabilities and isn't set on mute.
